### Environmental Monitor Construction Site Inspection Report MassDOT Project #608164 Construction Contract # 119678

#### EM Report #48

Project Description: Bruce Freeman Rail Trail Right-of-Way

Permit Description(s): Order of Conditions (MGL Chapter 131, Section 40 and 310 CMR 10.00, Mass DEP File No. 301-1362); 2022 EPA NPDES General Permit for Discharges from Construction Areas; U.S. Army Corps of Engineers Permit No NAE-2021-01975.

|  | I. General Project Information |  |  |  |  |  |  |  |
|--|--------------------------------|--|--|--|--|--|--|--|
| Project Name: Bruce Freeman Rail Trail - Phase 2d - Sudbury      |                                |  |  |  |  |  |  |  |
| Date of Inspections: 2/11/2025                                   |                                |  |  |  |  |  |  |  |
| Bi Weekly/ Monthly Period Covered: February Weekly Inspection #2 |                                |  |  |  |  |  |  |  |
| Inspector's Name(s): Anna Haznar                                 |                                |  |  |  |  |  |  |  |
| Inspectors' Contact Information: ahaznar@beta-inc.com            |                                |  |  |  |  |  |  |  |
|  | II. Weather Information        |  |  |  |  |  |  |  |

| Type of Inspection (i.e. non-storm event, pre-<br>storm event, during-storm event or post-<br>storm event): | Post-storm  | Non-storm                           |               |               |               |               |
| Number of days since last rain event greater<br>han .25"  | 4   |                                     |               |               |               |               |
| las there been a storm event since the last nspection?  | Yes   | No                                  |               |               |               |               |
| f yes, please provide storm start date, storm<br>luration, and approx amount of                             |   |                                     |               |               |               |               |
| Storm 1:  | January 31st (6 hours 0.70")  |                                     |               |               |               |               |
| Storm 2:  |   |                                     |               |               |               |               |
| Storm 3:  |   |                                     |               |               |               |               |
| Storm 4:  |   |                                     |               |               |               |               |
| Weather at the time of inspection (i.e. clear,<br>overcast, cloudy, rain, sleet, fog, snow,<br>windy):      | Clear   | Overcast                            |               |               |               |               |
| Temperature:  | 41  | 30                                  |               |               |               |               |
| Unusual Conditions (drought, severe storm):   | Approximately 2" of snow cover  | Approximately 5-6" of snow cover    |               |               |               |               |
| Have any discharges occurred since the last<br>nspection report?  | Yes   | No                                  |               |               |               |               |
| if yes, please describe:  | Wood chips from recent tree cutting<br>activities have discharged into the<br>wetland at Station 311+00, but do<br>not appear to be adversely<br>impacting existing vegetation. |                                     |               |               |               |               |

III. General Description of Construction Status

#### 2/4/2025 - At the time of the Site visit, no work was occurring.

2/11/2025 - At the time of the Site visit, no work was occurring.

| IV. Status of Existing BMPs                            |                                |  |  |  |  |  |  |  |  |
|--|--------------------------------|--|--|--|--|--|--|--|--|
| Control Measure (These are examples; list              | Cleaning or Repair Needed (yes | Comments/Recommendations from the EM   |  |  |  |  |  |  |  |
| measures specific to the project)                      | no n/a)                        |  |  |  |  |  |  |  |  |
| Perimeter Controls                                     | Yes                            | Perimeter erosion and sedimentation control measures were installed at the commencement of the Project and are in varying conditions across the Site; however, they were generally observed to be degraded. Perimeter controls were generally in degraded condition along culverts, streams, and cattle crossings. New perimeter controls were added on 6/27/2024 at Stations 310+00 through 311+00 as requested. New erosion controls have been installed between the path and the crushed stone shoulders at Station 216+00 to 217+50. Areas that still require stabilization do not appear to be at risk for erosion due to surrounding vegetation upgradient of Resource Areas, with the exception of the slopes along the stream at Station 215+00 to 217+00. |  |  |  |  |  |  |  |
| Inlet Protection Measures                              | No                             |  |  |  |  |  |  |  |  |
| Stabilized Construction Entrances                      | No                             |  |  |  |  |  |  |  |  |
| Stockpile Protections                                  | No                             |  |  |  |  |  |  |  |  |
| Dust Control   | No                             |  |  |  |  |  |  |  |  |
| Street Sweeping  | Yes                            | Crushed stone was observed on the path throughout the Project in varying volumes.  |  |  |  |  |  |  |  |
| Dewatering Controls                                    | No                             |  |  |  |  |  |  |  |  |
| Construction Equipment and Material Storage            | No                             |  |  |  |  |  |  |  |  |
| Construction and Domestic Waste Storage and Collection | No                             |  |  |  |  |  |  |  |  |
| Location of Sanitary Waste Facilities                  | No                             |  |  |  |  |  |  |  |  |
| Washout Areas  | No                             |  |  |  |  |  |  |  |  |
| Fertilizers, Herbicides, and Landscape                 | N/A                            |  |  |  |  |  |  |  |  |
| Stabilization of Exposed Soil                          | Yes                            | Varying degrees of stabilization are present within areas that were constructed/graded as part of the Project. Seed has been applied to multiple locations of exposed soil throughout the path. Erosion control blankets have been installed on the slope near Station 165+00 to 167+00 and Station 217+45. Loam that was applied to the streambank at Station 215+00 to 217+00 requires further stabilization. and erosion has occurred in this location. Due to the time of year, non-vegetative stabilization (i.e. erosion control netting) is recommended.  |  |  |  |  |  |  |  |
| Overall Adherence to Environmental Permits             | Yes                            | As noted in Action Items 41 and 42, it appears that work has been conducted beyond the limits of work approved under the Order of Conditions. These areas will require coordination amongst the Project Team to confirm if any restoration is required. A Site walk was conducted with BETA staff, MassDOT staff and the Conservation Agent on 11/19/2024 to discuss potential resolutions for compliance issues.  |  |  |  |  |  |  |  |
|  | Note                           | :<br>Use station numbers, wetland ID or other means to determine locations of BMP's that need repairs.   |  |  |  |  |  |  |  |

#### V. Compliance Table - Compliance Action Items

#### V. 1. Compliance Action Items Observed During the One Month Reporting Period Ending [February 28, 2025].

Current Open and Closed Compliance Action Items Observed During the Reporting Period Ending [June 30, 2024]. For those items within the most current two week period, color the Item in blue, as shown on lines 48-50 as an example. RED text indicates that the item is outstanding. Once item is resolved, place resolution date in 'Recommended Resolution/Resolution Date' column, convert to BLACK text, and move to the bottom of the Action Item list. Place resolution date on TOP of resolution action. Each Compliance Action Item is assigned a unique number only to be used to reference that item for the duration of the project. Separate but related Action Items will be labeled in an "Item Number-1 and Item Number-2" manner or similar. Completed action items can be removed once they have appeared in the Bi-Weekly Report to MassDEP

"<u>Urgent</u>" - Needs to be completed immediately, "<u>High</u>" - Needs to be completed in < 7 days due to site conditions, proximity to resource areas, anticipated weather, etc., "<u>Medium</u>" - Needs to be completed within 7 days and has short-term potential to impact resource areas, "Low" - Needs to be completed within 7 days with minimal potential to impact resource areas

| Iter | Location/ Description   | Observation Date | Resolution Due Date | Recommended Resolution /<br>Resolution Date                         | Comments/Updates   |
|------|---|------------------|---------------------|---|--|
| 62   | Loam and seed was applied to the<br>streambank at Station 216+00 to 217+00 and<br>requires further stabilization<br><b>Priority: High</b> | 11/25/2024       | 12/2/2024           | An erosion control blanket should be<br>installed along this slope. | <ul> <li>12/2/2024 - Loam and seed have been applied to the streambank at Station 215+00. Stabilization is required at Stations 215+00 to 217+00.</li> <li>12/6/2024 - Observation remains. See previous update.</li> <li>12/12/2024 - Observation remains. Rill erosion was observed within the loam applied to this area from Station 215+00 to 216+00.</li> <li>12/202024 - Observation remains. Loam has begun to erode, resulting in a discharge to the stream at Station 216+50.</li> <li>12/26/2024 - Observation remains. No further discharge was observed in this location.</li> <li>12/12/2024 - Observation remains. Additional loam has eroded resulting in a discharge to the stream at Station 216+50.</li> <li>12/2025 - Observation remains. No further discharge was observed in this location.</li> <li>1/9/2025 - Observation remains. No further discharge was observed in this location.</li> <li>1/9/2025 - Observation remains. Straw was observed to have been placed along portions of the streambank; however, this area should be stabilized using an erosion coursing a discharge of loam and straw into the stream was observed at Station 216+50.</li> <li>1/23/2025 - Observation remains. Strow coverage is present within the stream and on the streambank. No further discharge was observed during this inspection.</li> <li>1/30/2025 - Observation remains. Snow coverage is present within the stream and on the streambank. No further discharge was observed during this inspection.</li> <li>2/4/2025 - Observation remains. Snow coverage is still present over a majority of the stream and on the streambank. No further discharge was observed; however, stabilization is still required.</li> <li>2/11/2025 - Observation remains. Snow coverage is present over a majority of the stream and on the streambank.</li> </ul> |

| present within the swale in this area.<br>2/11/2025 - Observation remains. Stone is present within the swale under the leaf litter and snow. Trash is present<br>within the swale in this area. |

| 59 | Multiple locations of exposed soils along the<br>Project corridor require stabilization<br><b>Priority: High</b> | 9/3/2024 | 9/10/2024 | The contactor should apply the approved seed mixture to areas of exposed soils and place straw. | 9/3/2024 - Herbicide application caused multiple areas along the path to be no longer stabilized. If thatch is present in these locations the thatch should be removed before seeding occurs. A location near Station 320-50 has been cleared outside of the limit of work and requires stabilization. Other areas along the path where seed did not germinate should be reseeded with the approved seed mix and straw should be placed on the areas of exposed soil. 9/10/2024 - Observation remains, see previous update. A few locations along the trail have been hydroseeded but a majority of the locations of exposed soil requires ead and stabilization. 9/15/2024 - Observation remains. It does not apport as though any hydroseeding has been done since the last inspection. Areas throughout the trail require removal of thatch and application of seed for stabilization. 9/27/2024 - Observation remains. The contractor reached out and indicated all areas of exposed soils south of Hudson Road were hydroseeded and and orth of Hudson Road tware phydroseeding have hydroseed was applied in a few locations, but there are still arge areas of exposed soils botts outh and north of Hudson Road tware used to the Conservation Commission to ensure that the require lative seeding. Thatch was not removed in any areas before hydroseed was applied. The contractor should provide the tag from the seed mix that was used to the Conservation Commission to ensure that the required native seed mix was used per the design plans. Once vegetation has sem florentify stabilized, this item will be closed. 10/8/2024 - Observation remains. See update from 10/4/2024. No additional hydroseed has been applied since the last inspection. No germination has been observed in areas where hydroseed and subjet since the last inspection. No germination has been observed in a section swhere hydroseed was applied. 10/2/2024 - Observation remains. See update from 10/4/2024. No additional hydroseed has been applied since the last inspection. No germinat |
