

PHASE 1/1A SEWER PROJECT

Sudbury has been investigating wastewater options for the Route 20 Business District for decades. Septic systems continue to be an environmental concern due to the proximity of these on-site wastewater systems that discharge near the Town's Municipal Water Supply wells located on Raymond Road, as well as a limiting factor to business operations and/or actual relocation.

SAVE THE DATE! Wednesday June 7, 2023

The Town will be hosting a public outreach meeting for residents/homeowners regarding hydrogeological investigation and historical & archeological investigation efforts related to a new Wastewater Treatment Facility at the current Department of Public Works Site, groundwater discharge and the Phase 1/1A Sewer Project. The time and location are to be determined and will be posted to the project website once confirmed. *Another meeting will be scheduled for business owners in early fall of 2023.*

You can visit the Phase 1/1A Sewer Project website (**Scan QR code linked below**) to stay informed!
